

Chapter Kings Cross

Project Details

Location: London

Products: ULTIMA Insulated Spandrel Panels, UNITY Rainscreen Panels

Finishes: Black polyester powder coating

In this project, the need arose to replace the previous cladding with a solution that could offer improved safety, long-term durability, and a contemporary aesthetic. Our non-combustible ULTIMA Spandrel panels not only adhere to the strictest safety standards but also elevate the building's visual appeal. Working closely with the façade contractor NACWL, specialist architectural metal fabricator Metalline have manufactured and supplied over 9000m² of aluminium UNITY Rainscreen Panels from their recently extended facility in Cannock. Delivery which commenced in September was completed within 10 weeks.
